Versioncheck

This page is meant for users who have updated their coppermine install. This script goes through the files on your webserver and tries to determine if your local file versions on the webserver are the same as the ones from the repository at <http://coppermine.sourceforge.net>, this way displaying the files you were meant to update as well. It will show everything in red that needs to be fixed. Entries in yellow need looking into. Entries in green (or your default font color) are OK.

Click on the help icons to find out more.

As this file didn't come with your original version of Coppermine or was added to the package after translation was already done, there's no internationalisation - it is available in English only.

Options

- | | | |
|---|---|--|
| <input checked="" type="checkbox"/> show optional folders/files | <input type="checkbox"/> show folders/files with errors only | <input checked="" type="radio"/> don't display web cvs link |
| <input checked="" type="checkbox"/> show mandatory files | <input type="checkbox"/> coppermine is installed in the webroot | <input type="radio"/> display web cvs link to stable branch |
| <input checked="" type="checkbox"/> show additional information | <input checked="" type="checkbox"/> try connecting to the online repository | <input type="radio"/> display web cvs link to devel branch |
| <input checked="" type="checkbox"/> show file versions | <input checked="" type="checkbox"/> show folder permissions | <input type="checkbox"/> show condensed ouput (for easier screenshots) |

[apply changes](#)

[reset to default values](#)

Installed Coppermine version

You have currently installed: **1.4.4**

If you think this is entirely wrong and you're supposed to be running a higher version of Coppermine, you probably haven't uploaded the most recent version of the file *include/init.inc.php*
